

# OPTIMIZE APPLICATIONS

**CONTROL. COMPLIANCE. ALIGNMENT.** Serving up business results from today's menu of applications is hard. Delivering and managing the "combo-platter" of legacy apps, packaged apps, and new SOA/Web Services environments requires rigor and automation. That's why IT leaders rely on Mercury to automate IT governance and optimize the quality, performance, and availability of business-critical applications. In fact, 86 percent of the *Fortune* 100 use Mercury to test and deliver applications, manage and document change, and measure and monitor performance to help ensure that business service levels and compliance mandates are met.

To learn how to optimize applications and achieve a sustainable approach to compliance, download an executive whitepaper at [www.mercury.com/optimize-apps](http://www.mercury.com/optimize-apps).
